WEICITY

PRODUCT BROCHURE · SALES EDITION · OCTOBER 2026

One account for your social, business & files

WeiCity — **social feed · channels & marketplace · nearby local deals · cloud drive · chat**, all in one place.

Grow an audience, run your business, bring nearby customers in with a coupon, store and share your files — everything under a single account.

wei.city

On the App Store & Google Play

October 2026 Edition

WHAT IS WEICITY

Social × Marketplace × Local × Drive × Chat
Your digital life, in one place

WeiCity (wei.city), operated by WeiCity Inc., is an all-in-one platform: post and connect like social media, run channels and storefronts like your own website, bring nearby customers in like a local-deals app, store and share files like a professional drive — one account for all of it.

Social Feed

Post updates (up to 9 photos or video), like / reply / repost / bookmark, @mentions, hashtags, one-tap translation; fresh content gets a real chance.

- For You / Following
- Custom Lists
- @handle short link

Channels & Marketplace

A branded channel (website + storefront in one) with the modules you need — articles, shop, food menu, video, gallery, today's deals; Stripe checkout, priced in RM.

- AI shop setup
- Feature modules
- 17-industry directory

Nearby · Local Life NEW

"Nearby" on the phone shows businesses by distance and open-now; merchants post today's deals, customers claim a free voucher and redeem it in store — more walk-ins.

- Open-now in real time
- Claim · redeem
- Followed merchants

Cloud Drive

30GB starter from RM35 a year; drag-and-drop upload, preview, Office editing in the browser; named-account / password / expiry / view-only sharing; plans up to 10TB.

- 512GB–10TB plans
- Office online editing
- Encrypted folders

Chat

DMs and group chat with images; send Drive files and folders in chat — links never auto-expire, revocable anytime; one-tap "WeiCity Message" on every channel.

- DM + groups
- Send Drive files
- WeiCity Message

AI Assistant

Open a shop by chatting; photograph a shelf or record a short video and AI drafts the products for your review; deal copy, article drafts and artwork on call.

- AI channel wizard
- Photo-to-product
- Copywriting

Available everywhere: Web + PWA (add to home screen) · Android on Google Play · iOS on the App Store · Simplified / Traditional Chinese / English · notification bell + push alerts

SOCIAL · THE FEED

Post it. Get seen locally.

Two feeds on the home page — For You and Following — plus a Discover page for what's trending across the platform. One post carries photos, video, links and hashtags.

Smart For-You ranking
Fresh content gets a real chance to surface — no stale viral posts hogging the top. Following shows only people you follow.

Photos & video
Up to 9 photos per post, or publish video; hashtags group your content for extra reach.

Full interaction set
Likes, replies, reposts, quote posts, bookmarks — every interaction is free exposure.

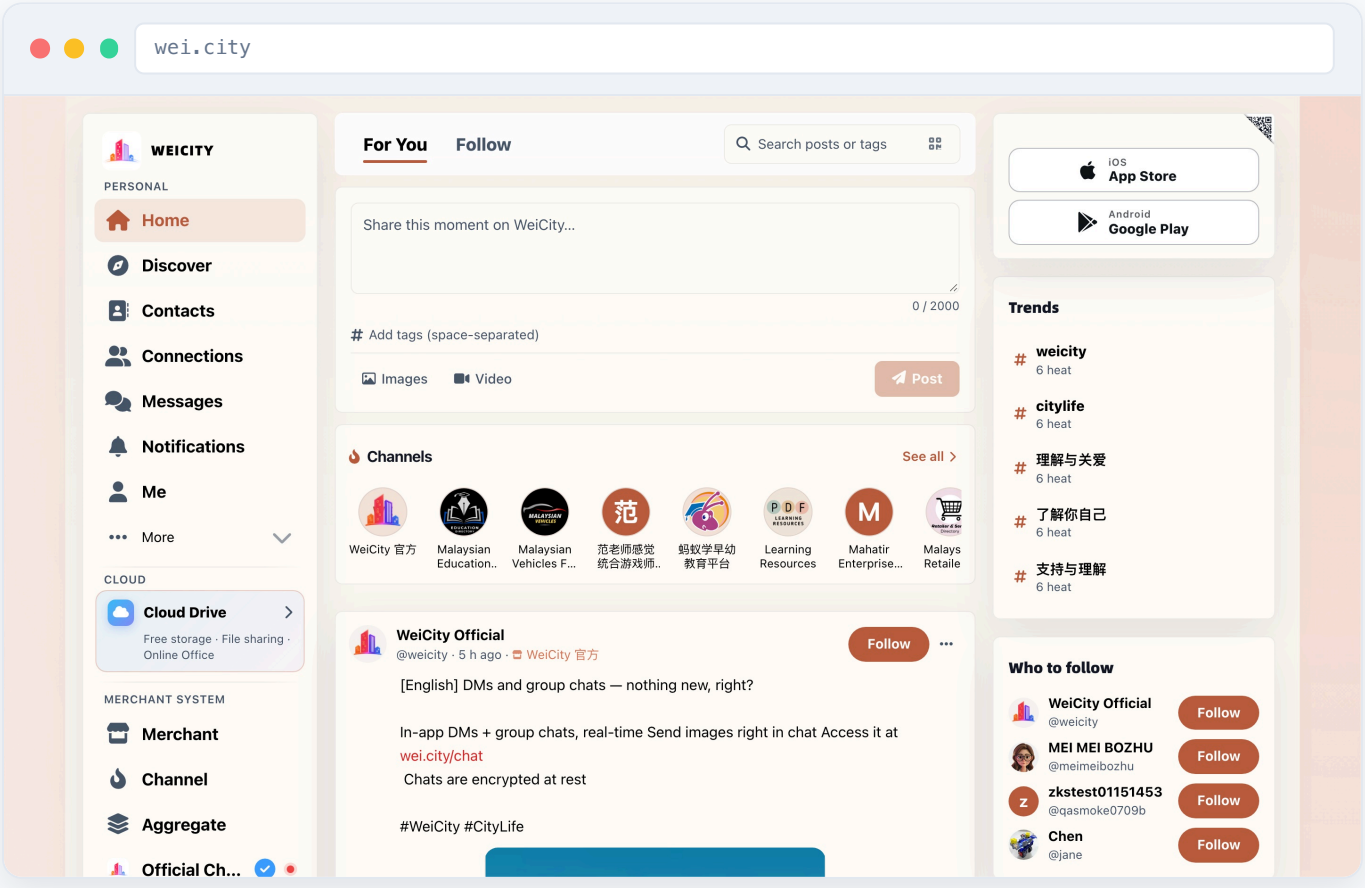

@mentions & pinning
Pull people into the conversation with @mentions; pin your best post to the top of your profile.

One-tap translation
Translate any post after signing in — Chinese and English content flows both ways.

Never miss a thing
Likes, comments, follows, orders and system updates — notification bell plus push alerts.

Link cards NEW
Paste a URL and post: title, summary and image are fetched into a preview card — share without typing a word.

Discover what's trending
Popular posts and trending hashtags across the platform gather on the Discover page — see what your city is talking about.

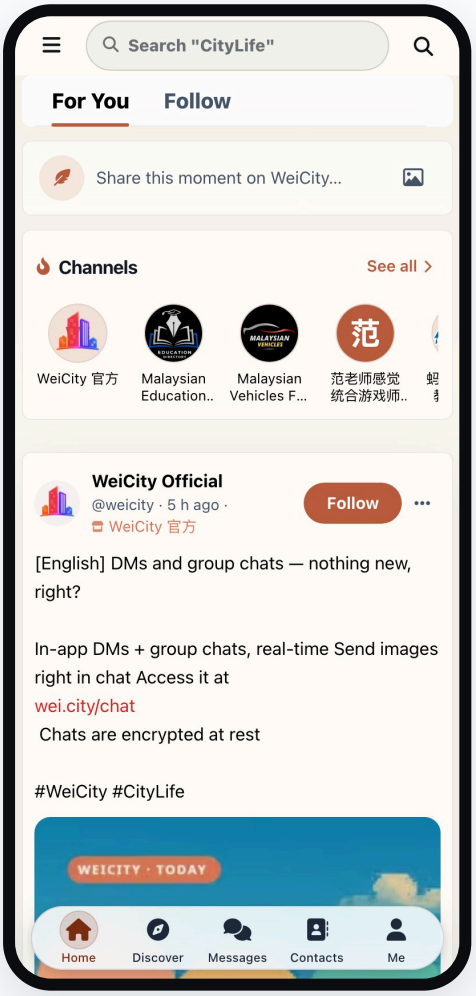

WeiCity home · left nav / For-You feed / channel row / trending & who to follow (actual product screenshot)

SOCIAL · CONNECTIONS & PROFILE

Build your network and your personal brand

Follows, followers and suggestions live together on the Connections page; add your own @handle short link, and your profile stays ready to send as a card (name card details on the next page).

The same experience on mobile web / PWA / App (actual product screenshot)

Connections: follows / followers / suggestions

Smart "who to follow" powered by second-degree connections — the people your people follow — to grow your local network fast; following is one-way and needs no approval.

Custom Lists

Create named lists of any users (even ones you don't follow yet); each list has its own feed, and private lists stay visible only to you.

@handle short link

Claim your @handle and get a personal short link — wei.city/social/u/@yourname — for name cards, group chats and bios. One tap, straight to you.

Pin your signature post

Keep your most important post at the top of your profile — the first thing every visitor sees.

Display, your way NEW

Settings → Display: 6 accent colours (terracotta, ocean, emerald, teal, violet, rose), 5 text sizes, 4 font styles, light or dark — easy on older eyes, sharp for younger ones.

Who is it for?

- Local businesses
- Freelancers
- Content creators
- Clubs & organisations
- Anyone meeting people nearby

SOCIAL · CONTACTS & NAME CARD NEW

Contacts is your address book, Connections is your following

One name card explains both

The App's bottom dock now has a dedicated "Contacts" tab: everyone you **mutually follow** — your messaging address book. "Connections" (follows / followers / suggestions) is **one-way**. They cover different jobs and never replace each other.

Contacts = mutual-follow address book

The Contacts tab lists people who follow each other and message regularly; from there you can jump straight to Connections for followers and suggestions.

Connections = one-way following

No approval needed — good for tracking merchants, creators and anyone you're interested in; it runs on the social feed, not messaging.

A digital name card: your profile, already built for it

Your profile is the card

Your profile short link plus **?card=1** is the card page: avatar, bio and your info lines on one page — no extra design needed.

Scan to add a contact

Scan your card's QR code in the App and they follow you in one step; follow back and you appear in each other's Contacts, ready to DM.

Save to phone contacts

Visitors tap "Save to contacts" on your card (a standard vCard) — your name and phone land in their phone instantly.

Custom info lines

Company, title, email, phone, website, plus custom labels — up to 10 lines. You decide what the card says.

Write to NFC NEW

In the App, write your card or channel onto an NFC card — a tap opens it. Write-only, never reads the other phone's data.

Works for merchants too

Channels get their own card QR code — print one in store and customers follow and find your contact details in one scan.

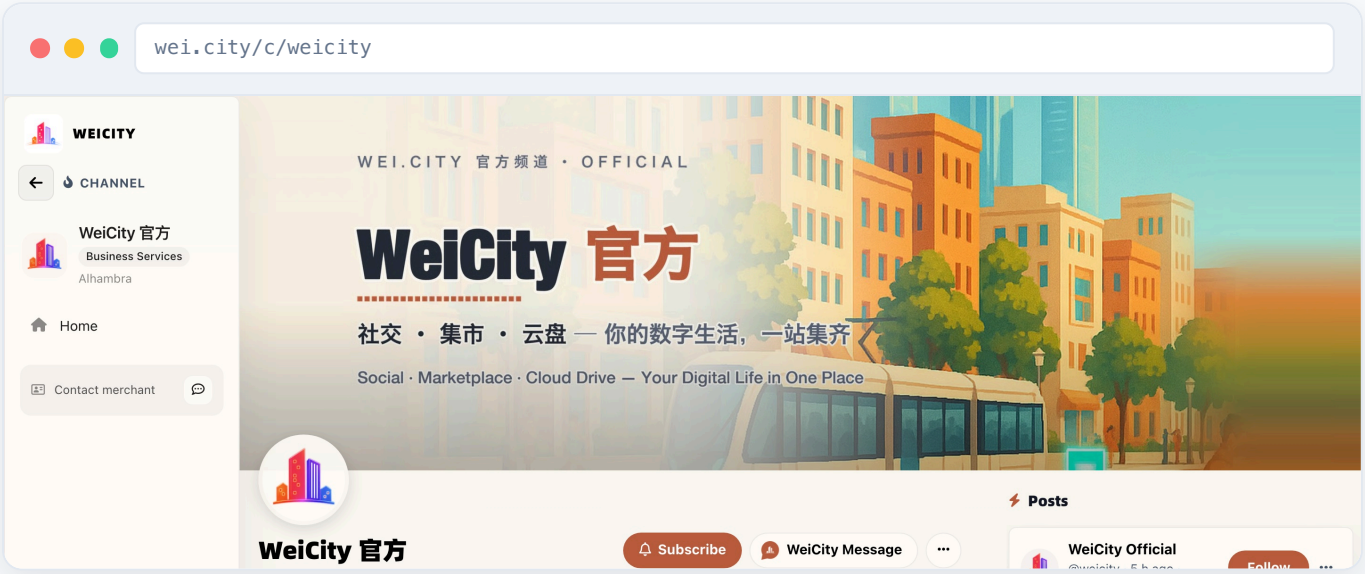

One card, three uses: hand it to a customer as your intro, print it in-store as a lead magnet, or write it to an NFC card so a tap adds you — all the same profile, nothing to maintain twice.

BUSINESS · CHANNELS

Your website + storefront, combined

Now built from feature modules: add only what you need

Open a branded channel on WeiCity: a home page and brand presence like a website, listings and checkout like a store — with social traffic built in. The channel's left rail is the list of modules you've installed, so customers understand it at a glance.

A channel page (WeiCity Official): brand banner · "Home" + "Contact Merchant" cards in the left rail · subscriber and view counts · WeiCity Message button · latest updates on the right (actual product screenshot)

Six feature modules, install as you go NEW

Articles	Shop	Food menu	Video	Gallery	Today's deals
news, notices, long-form	products, cart checkout	add-ons, delivery / pickup	single or paid series	portfolio, cases, albums	specials, off-peak, vouchers

One-click modules, drag to sort

Add features right on the channel page, drag to reorder, rename modules; sections and categories stay fully yours to arrange.

Region + opening hours

Set your service area and opening hours; "Open now" shows in real time and nearby customers find you precisely.

Team co-management

Delegate multiple admins so your team runs content and orders together.

WeiCity Message + QR

The first contact option is in-app "WeiCity Message" — one tap to DM you; print your channel QR in store and customers scan straight in.

BUSINESS · AI SETUP & DISCOVERY

Open your shop by just chatting

Can't write a bio? No designer for the banner? Use the AI channel wizard: describe your business the way you'd tell a friend, and the assistant picks your industry, suggests tags and modules, and sets the channel up.

1

Describe it in one sentence

"I run a coffee shop in Penang" — where you are and what you do is enough.

2

AI fills in the rest

Profile, banner artwork and home-page content; it picks your industry (one of 17) and tags and suggests modules — contact details stay yours to enter; the AI never makes them up.

3

You're open

Hit "Create my channel" and your website + storefront goes live; accept the suggestions in one tap or change any of them.

Once you're open, where do customers find you?

Merchant discovery · 17 industries

Browse by industry (food, education, home & building, real estate, retail, …) with a live merchant count each — your channel gets discovered here.

Three content tabs NEW

"All products · Coupons · Discounted items" tabs, plus quick shortcuts to Shop / Food / Video up top.

"Recommended channels" NEW

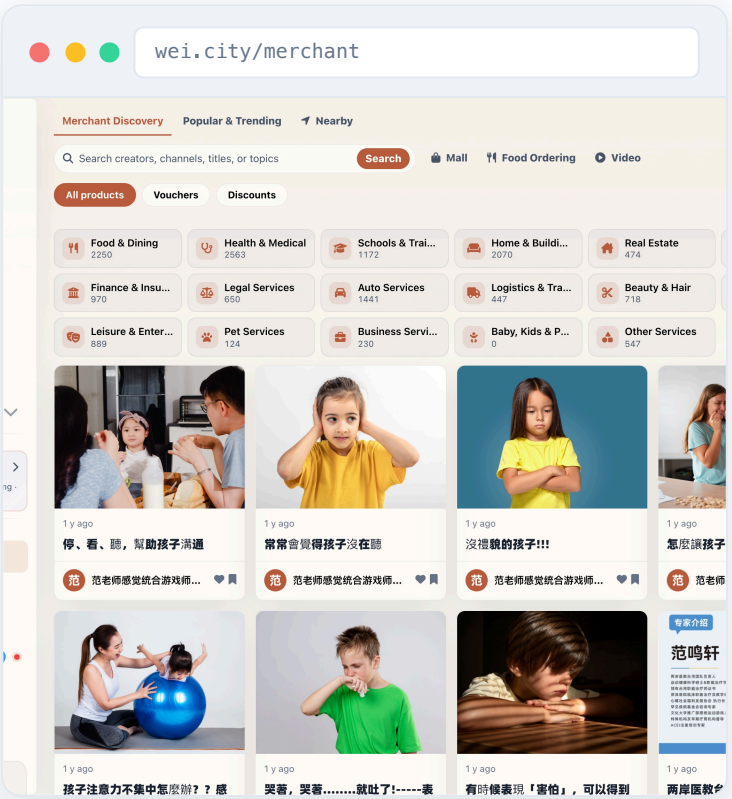

Ranked by content activity, local popularity and freshness, plus your follows, likes and region when signed in.

Official spotlight NEW

The directory occasionally features an officially curated spotlight, with promo artwork and scheduling — placement is curated by WeiCity, not self-serve.

Themed markets

Curated markets that group similar businesses, each with a public board for offers and requests.

Merchant discovery · All products / Coupons / Discounted items tabs · 17 industry tiles · equal-height grid (actual product screenshot)

Prefer to do it yourself? The classic setup form is always there — both roads lead to opening day. The AI simply turns "fill forms, design artwork, pick an industry, plan sections" into a short conversation.

BUSINESS · MARKETPLACE & FOOD ORDERING

List, sell, get paid — end to end

Sell straight from your channel: buyers check out via cart, Stripe handles payment securely, and everything is priced and settled in Malaysian Ringgit (RM). Listing isn't typed item by item either — photograph the shelf and let AI turn it into product drafts.

Variants → SKU matrix

NEW

Up to 3 option groups (size, colour, …) auto-combine into up to 100 SKUs, each with its own price and stock — the standard product-page model.

Stock deduct & restock

NEW

Deducted on order, auto-restocked on cancellation, oversells logged and visible to you — never a silent shrink, the numbers always reconcile.

Secure Stripe checkout

Cart checkout with online payment; the platform never stores full card numbers — transactions ride on international payment standards.

Food ordering

Restaurants list menu items with multi-choice add-ons (priced); customers pick delivery or self-pickup, and you can set a minimum order.

Product management centre NEW

Switch between list and grid views to manage products and orders, with team roles — your business at a glance.

Digital goods + order alerts

PDF e-books and courseware sell the same way, delivered after payment; new orders ring the bell and push to your phone.

AI product import NEW — snap a photo and the shelf is in your shop

1

Photo or video

1–6 photos of products or a shelf, or a video under 2 minutes — straight from the phone browser.

2

AI lists the candidates

Names, price tags and per-item images are recognised; no readable tag, no price — numbers are never invented. Ingredients, allergens and origin stay yours to fill in.

3

You review, drafts in one click

Tick what you want, adjust prices, pick the section; hidden drafts are created and you publish when happy — AI drafts, you review, then it goes live.

Three ways to list in bulk: photo / video AI recognition · one-click import from a web page · back-office batch import — all land as drafts, publishing stays in your hands. Want pre-orders or scheduled pickup? Turn the page.

BUSINESS · PRE-ORDER & SCHEDULED PICKUP NEW

Take deposits early, serve customers on schedule

Stock hasn't arrived yet? Sell it anyway. Picking up in person? Let customers book a time slot. Marketplace and food ordering share the same pre-order and scheduled-pickup toolkit.

Pre-order: full payment now, ships when it arrives

1

Set an arrival date

Mark a product as pre-order and set an expected arrival date; the button reads "Reserve now" instead of "Add to cart".

2

Customer pays in full

Customers pay the full price to reserve; the order snapshot records the expected arrival date for easy reconciliation.

3

Auto-converts on arrival

Once the arrival date passes, the product automatically switches back to a normal in-stock item — no manual toggle needed.

Scheduled pickup: customers pick a slot, you batch the work

Channel-level slot rules

Set the dates and time slots your channel offers for pickup; nothing outside opening hours is offered.

Per-product lead time

Products that need prep can require a minimum lead time in hours, so no one shows up before it's ready.

Calendar picker at checkout

Customers pick a date and slot from a calendar pop-up at checkout — required before the order can be submitted.

Shared by shop and food

The same slot rules work whether you're selling products or menu items — one system to learn, not two.

Snapshot on the order

Pickup date and slot are written into the order snapshot; changing the rules later never rewrites old orders.

Prep in batches, no chaos

Batch prep by time slot instead of scrambling at peak hours; customers aren't left waiting at the counter either.

Who it's for: pre-order suits new launches, limited runs and anything that needs lead time; scheduled pickup suits in-store pickup, bakeries and made-to-order food.

BUSINESS · NEARBY LOCAL LIFE NEW

Nearby customers claim a voucher — and walk in

"Nearby" is built for the phone: turn on location or pick a city manually, then 5 tabs —**Deals** · **Discounted items** · **Shop** · **Food** · **Merchants** — filtered by distance (1 / 3 / 5 / 10 / 20 km), open-now, and industry tiles.

STEP 1

Get seen

Location or manual city pick either works; 5 tabs + distance filter + industry tiles surface nearby businesses fast.

STEP 2

Show the deal

Today's special, off-peak special and recurring deals as structured deal cards; free and paid vouchers sit side by side.

STEP 3

Claim or buy a code

Free vouchers, one per person; paid vouchers pay via Stripe — both issue an 8-digit code + QR under "My vouchers".

STEP 4

Redeem in store

Staff scan or type the code in a phone browser — sign in to the channel, no hardware needed.

STEP 5

Follow & return

Customers follow your channel; the "Followed merchants" page shows every update, in full.

Open now, in real time

Enter your opening hours (overnight and 24-hour both supported); channel page and Nearby list show "Open / Closed" from the same rules — no wasted trips.

Today's deals + recurring deals NEW

Beyond specials, off-peak prices and free vouchers, set a recurring deal like "every Wednesday afternoon" that turns on and off automatically.

AI-written deal copy

Pick a template, give your shop name and a hint, and AI writes the title and copy; discounts, prices, quotas and deadlines are always yours to enter.

Followed merchants: no ranking, no hiding

Everything a followed merchant posts shows on the "Followed merchants" page in full, by time — merchants never pay to reach their own fans.

Deals in the merchant console

Publish, pause and watch claims and redemptions in the console; redemption records are yours alone and customer details stay private.

Free and paid vouchers, two paths

Free vouchers redeem face to face with no platform payment; paid vouchers go through Stripe online with automatic order tracking.

An opener: "Your regulars, WeiCity helps you keep; the walk-bys, WeiCity helps you catch — post a free voucher, customers claim it on their phone, you scan it at the counter, and the cost is that one coffee."

CREATOR · MONETIZATION & EDITOR

Turn what you know into income — with an editor that keeps up

If you can write it or teach it, you can sell it on WeiCity: paid articles and paid video series are built in; the rich-text editor also got a full upgrade this round, from draft to publish.

Paid articles

Put a price on an article and readers unlock the full text. Stripe payment, RM pricing — one great article can be a revenue line.

Paid video series

Price the whole course; buy once, watch it all. Free preview episodes bring viewers in — built for courses and tutorials.

Editor, fully upgraded NEW

Writing itself got easier too:

- Auto-save
- Word count & read time
- Table of contents
- Revision history
- @mentions
- Link embeds
- Product cards
- Code blocks (syntax highlight)
- Drag-to-reorder galleries
- Paste from Word / Google Docs, formatting kept

Why sell here instead of building your own site?

The Merchant plan unlocks it

The Merchant plan includes paid articles and video series, unlimited sections and content, and channel AI (pricing on a later page).

Your audience already lives here

Grow followers in the feed, gather them in your channel, monetise the content — one account, no dragging fans between apps.

A real paywall

Non-buyers see only the preview and summary; full text and video streams are gated server-side — no leaking via direct links.

AI drafts and illustrates

Channel AI drafts articles from your prompt, polishes titles and summaries, and generates artwork.

The creator loop: post to grow followers → followers join your channel → price your content → Stripe checkout (RM) → income lands

CHANNEL PLANS NEW

Run a business on a channel: from the RM0 Starter

Only users who open a channel and trade need a plan; browsing, social, following, chat and buying are free for everyone, always. Plans are billed per channel, priced in RM, auto-renewed via Stripe, cancel anytime.

Starter

free showroom, forever

RM0 / forever

- ✓ Five templates: food, retail, service booking, personal creator, education
- ✓ Turn on all 5 features on one channel: site / shop / food / video course / gallery
- ✓ 5 sections + 5 items per feature
- ✓ Visitors can order and pay online
- — No channel AI or paid content
- — Not listed in the public directory / discovery / sitemap by default

The only self-serve paid plan

Merchant

grow and trade online

RM99.90 / mo

Yearly RM999 ≈ RM83.25 / mo (about 17% off)

- ✓ Unlimited new sections and content
- ✓ Channel AI: drafts, polish, artwork
- ✓ Paid articles and paid video series
- ✓ Online orders and payment, products / stock / promotions
- ✓ Listed in the public directory and search

Brand

chains & custom needs

Contact us

Custom quote by outlet count & needs

- ✓ Everything in Merchant
- ✓ Brand-level booking / scheduling features
- ✓ A dedicated account manager

Cancel anytime

Cancel yourself in the Stripe customer portal from the web plans page — it only stops future renewals; the paid period runs to its end.

×10

Yearly = 10 × monthly — pay for 10 months, use 12 (about 17% off); switch a monthly plan to yearly anytime.

No freeze

When a plan lapses you only fall back to Starter's creation and trading limits — existing channel, sections, content, products and public status stay as they are.

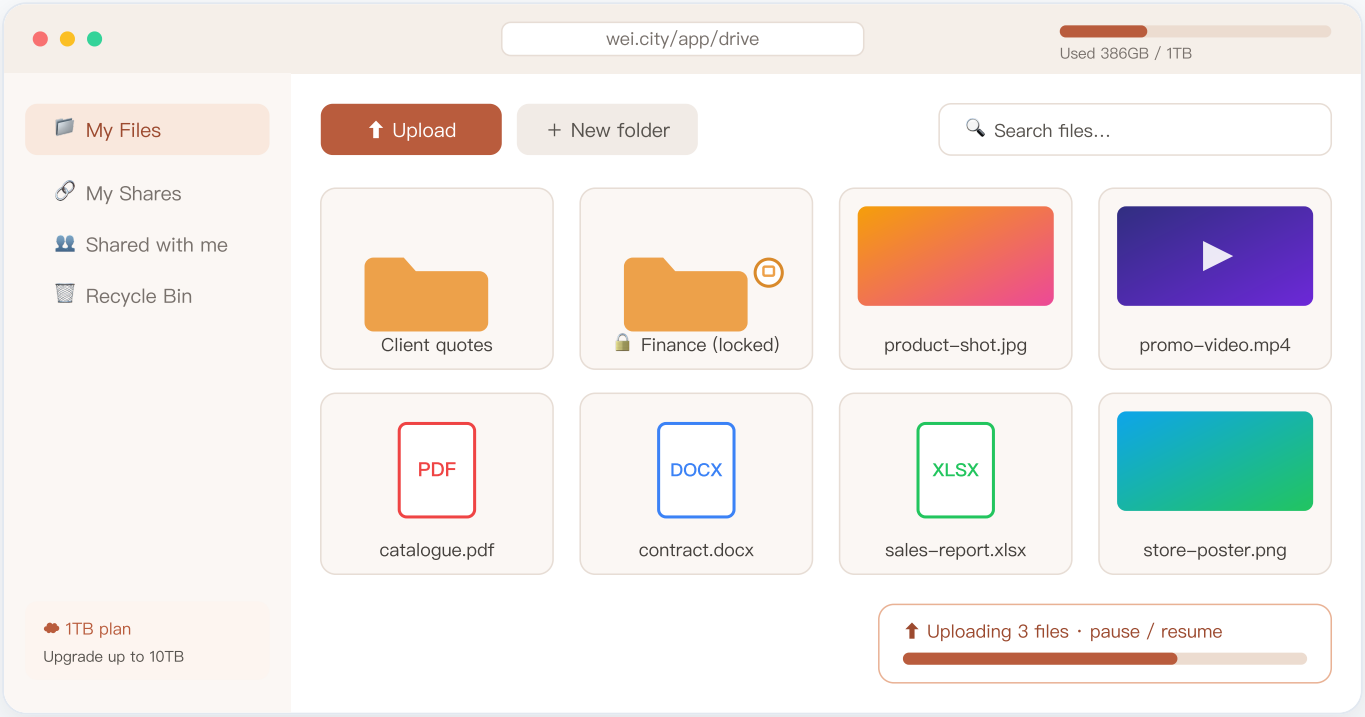

Existing channels, relax: channels that existed before the 2026-08-10 announcement, with no plan record and not template-generated, are **never subject to plan limits**. **Market plans** (themed markets with member management) and larger needs are quoted by contract — contact z@wei.city.

* Prices as displayed live on the web plans page. Channel plans are subscribed on the web via Stripe only; the App shows no prices or purchase buttons (app-store channel rules, not a fault); a subscribed channel enjoys the same plan inside the App. Plans do not include Drive storage — Drive plans are billed separately (see later pages).

CLOUD DRIVE · FLAGSHIP

Sharing under control — over quota, not deleted

The **30GB starter is RM35 a year**, with sizes up to 10TB; on 512GB and up a consultant's promo code gives first-time buyers a first-year promo price, and larger needs get a custom deal from sales.

Drive interface illustration · wei.city/app/drive

Consultant promo codes

First-year promo price on your first 512GB+ plan, or a free code for 30GB for a year.

Over quota, not deleted

Excess turns read-only and stays retrievable. Only after 24 months with no active plan, and multiple notices, may that excess be reclaimed — your available space is untouched.

Seven sizes, 30GB–10TB

Buy by usage, upgrade anytime; 20TB+ gets a tailored quote from sales.

Sharing under control

Named accounts, password, expiry, view-only, visit counts (next pages).

Office in the browser

Edit Word / Excel / PowerPoint online — original format, layout intact.

Everywhere you are

Web, mobile browser and App — your files follow you.

CLOUD DRIVE · EVERYDAY EXPERIENCE

The details that make it a joy

From the moment a file lands to opening, editing and recovering it — every everyday step happens right in the browser.

Drag & drop · resumable

Drop files onto the page to upload; up to 20GB per file, big files go up in chunks with pause / resume and live progress.

Online preview

Photos, video, audio, PDF and text open instantly with no download; grid view shows image thumbnails.

Office editing online

Open, edit and save Word / Excel / PowerPoint right in the browser — original format, high fidelity, layout intact.

Batch & ZIP

Multi-select to download / move / delete; pack a whole folder into a ZIP that starts streaming instantly.

30-day recycle bin

Deleted by mistake? Restore within 30 days. Folders, rename, move, search and a "Recent" view are all built in.

Available everywhere

Manage your drive from web, mobile browser or App; files are stored safely with automatic tiering — frequent files open instantly.

Built for business: quotes, contracts, courseware, creative assets — park them in Drive first, then share on your terms (next page).

CLOUD DRIVE · THE SHARING SUITE

The drive that knows how to share: files obey you even after they're sent

Any file or folder becomes a share link in one tap, and visitors need no account to view. One share form, three dimensions: **who can access · expiry · permissions** — and **every control below is included on every plan.**

Links + expiry

1 / 7 / 30 days or no expiry — your choice; revoke anytime and the link dies instantly; new version, new link, old one gone.

Password protection

Lock share links and folders behind a password; change it and old visitors are out.

Share to named accounts

Share to specific WeiCity accounts only — recipients must sign in, precise to the person; tick "notify by DM" and the link card lands in their chat.

View-only, no download

They can look but not take: Office / PDF render read-only (no download, print or copy), photos and video play through a proxy — the original file's link never reaches them.

Encrypted folders

Lock sensitive folders with their own password — even you unlock to enter; forgot it? Recover via your verified email.

Send in chat

Send Drive files and folders inside chat — links never auto-expire and revoke anytime. No more "file expired".

Visits you can see: every share carries a visit counter — you know who's been looking; "allow editing" even lets them edit Office files online. Password + expiry + view-only + counting adds up to **lightweight DRM** for your documents.

CHAT · DIRECT MESSAGES & GROUPS

More than chat: files that never auto-expire, customers who find you in one tap

DMs and group chat got a full upgrade: reactions, voice messages, @mentions, group polls, scheduled sends and forward-with-a-note are all here; Drive files still go straight into the conversation with links that never auto-expire.

DMs + groups + user groups

1:1 and multi-person groups, plus groups you create yourself with invite codes, approval, kick/mute; synced across web and App.

Reactions + voice messages NEW

Any emoji as a reaction; voice messages with waveform, speed control, auto-continue, tap-to-talk on the App.

@mentions + group polls NEW

@mention to pull people in; polls (single / multi-choice, anonymous, quiz) with vote changes, creator close.

Scheduled send + forward-note NEW

Send later, cancel from the schedule list; forward to up to 5 chats with your own note attached.

Voice-to-text + translate NEW

Transcribe voice in one tap, translate across languages; chats archive and un-archive on a new message.

Send Drive files / folders

Send a Drive file or folder in chat; recipient opens it instantly. Links never auto-expire, revoke anytime.

WeiCity Message: one tap to a merchant

Every channel's contact card leads with "WeiCity Message" — one tap opens a DM, zero setup for the merchant.

Report, block + push alerts

Block and report in one tap, messages stored encrypted; pushes grouped by conversation on iOS.

Why chat on WeiCity: files in common messengers expire within days and important documents get re-sent over and over; what you send on WeiCity is a **Drive file** — the link never auto-expires, survives phone changes, and can be revoked if sent by mistake.

WHY WEICITY · PART 1

Others need a stack of apps. WeiCity needs one account.

The usual way: one app for social, a platform for the shop, a deals platform for vouchers, a drive for files, a messenger for chat — separate accounts, and your followers and data can't move between them. WeiCity puts them under one roof.

Capability	WeiCity	The usual stack
Social feed	✓ Built in (posts, follows, discovery)	A separate social app
Website + channel	✓ Built in (feature modules, brand page, AI setup)	Site builder, extra monthly fee
Store checkout	✓ Built in (Stripe payments · RM pricing)	Marketplace platform, their rules & traffic
Food ordering	✓ Built in (add-ons, delivery / pickup, minimum order)	Delivery platform, customers stay on their app
Nearby exposure + vouchers	✓ Built in (nearby ranking, free-voucher claim & redeem, money never passes through us)	Deals / local-life platforms, yet another back office
Cloud drive	✓ Built in (from the 30GB starter, sharing controls on every plan)	A separate drive app, controls on paid tiers
Chat	✓ Built in (DMs, groups, Drive files that never auto-expire, WeiCity Message)	IM tool where files expire in days
Content monetization	✓ Built in (paid articles / video series)	Paywall platform, yet another account

One account closes the whole business loop

Post to grow followers → followers enter your channel → nearby customers claim a voucher and walk in → products & content check out → files delivered from Drive → chat keeps the relationship — **every step inside WeiCity, no dragging customers between apps.**

One sign-up, whole platform · Followers & content stay with you · 简 / 繁 / EN trilingual · Web + PWA + both app stores

WHY WEICITY · PART 2

Seven sizes from 30GB to 10TB: buy what you actually use

No need to jump straight to a big plan: pick the size that fits the customer's **real usage**, upgrade any time and remaining value converts automatically. Yearly is roughly pay 10 months, use 12; on 512GB and up, first-time buyers also get a **consultant's first-year promo price**.

Size	Monthly	Yearly (per-mo.)	Good for	Consultant code
30GB	RM3.50	RM35 / yr ≈ RM2.92	Light personal use starter · yearly suggested	Not eligible
120GB	RM8.90	RM89 / yr ≈ RM7.42	Phone photos & everyday files starter	Not eligible
512GB	RM16.90	RM169 / yr ≈ RM14.08	Small-team files · a light step up	✓ first year
1TB	RM29.90	RM299 / yr ≈ RM24.92	Creators & small merchants	✓ first year
2TB	RM42.90	RM429 / yr ≈ RM35.75	Families & studios	✓ first year
5TB	RM97.90	RM979.90 / yr ≈ RM81.66	Heavy storage	✓ first year
10TB	RM194.90	RM1,949.90 / yr ≈ RM162.49	Professional archives	✓ first year

When customers bring up other drives

Say this

"Pick the size you actually need — no need to buy 2TB up front." "Yearly is cheaper than paying monthly for a year." If they insist on comparing, ask them to **open both providers' current official pages side by side** — we don't argue with stale competitor prices; we talk sharing control and business integration.

Don't say

"Cheaper than Google / Apple / Microsoft", "lowest price anywhere" · "yearly is ~17% below Google" (old price check, retired) · "more free space than Google" · "the bigger you buy, the cheaper per TB" · comparing the 30GB / 120GB starters with competitors · "the App costs the same as the web" · "unlimited traffic".

* Prices as displayed live on the wei.city plans page (October 2026 edition); web billing in MYR via Stripe. 5TB yearly RM979.90 and 10TB yearly RM1,949.90 are not exactly 10 × monthly. In-app prices are whatever the App Store / Google Play shows locally and may differ from the web; the 30GB / 120GB starters are web-only for now.

WHY WEICITY · PART 3

Six differences you can explain face to face

No "better at everything" claims — just differences that survive a customer checking for themselves.

Aspect	WeiCity Drive	Typical mainstream drives
① Over quota	**Excess is not deleted on the spot: files turn read-only and stay retrievable. Only after 24 months with no active plan, and multiple notices, may the portion above the available space be reclaimed — files within it and the account itself are untouched, and any active plan makes this clause moot**	Google's official policy: over quota for 2+ years, your content may be deleted, and email sending is affected
② Capacity & price	**Seven sizes, 30GB–10TB, by real usage; promo codes on 512GB+**	Big jumps between sizes mean paying for unused space
③ Sharing controls	**Named accounts, password, expiry, allow download / allow editing, one-tap revoke, visit counts — the full set on every plan**	Password links: not on Google personal, Dropbox needs Professional, OneDrive needs M365; link expiry: not on Google personal
④ View-only	**Down to the byte level: Office / PDF render read-only (no download / print / copy), photos & video stream via proxy, the original file link never leaves**	A basic "block download" toggle is common; coverage and combinations vary by vendor
⑤ Files in chat	**Send Drive files / folders inside built-in chat: never auto-expire, revocable, permission-controlled**	Messenger files expire in days; drive products have no chat at all
⑥ A human to call	**Local team with human support (z@wei.city, usually within 1 business day); big-volume needs get a custom plan**	On big-tech personal plans, a human is nearly impossible to reach

In one line: we're not a "cheaper Google Drive" — we're **the drive that knows how to share**: sharing control, social integration, and a data promise.

* Competitor capability notes are based on public materials and official policy pages as of July 2026; verify against official sources for updates.

CLOUD DRIVE PLANS

From 30GB to 10TB

RM194.90 / mo

Yearly RM1,949.90 ≈ RM162.49 / mo

Professional archives

Free code

RM0 / 1 year

30GB bonus space

From your consultant · once per account

Yearly ≈ pay 10, use 12, auto-renews · web via Stripe; in-app via the store at store prices (starters web-only) · Promo codes: first 512GB+ purchase, first year at the code's price · 20TB+ via sales.

The three questions customers always ask

Plan expired — what happens to my files?

Not deleted on the spot. Excess turns read-only, downloads still work, and renewing restores everything. With no active plan for 24 months, and after multiple notices, that excess may be reclaimed — available space is untouched.

If I upgrade mid-cycle, do I lose money?

No. Remaining time converts into the new plan by price ratio — value carries over exactly.

How do I cancel auto-renewal?

"Manage subscription" in the plans dialog, anytime; the paid period runs to its end, then space falls back to your other allowances.

* Prices as displayed live on the wei.city plans page (October 2026 edition); in-app prices follow the store; each account's free base space is shown on its plans page.

FOUR CUSTOMERS, FOUR STORIES

Match the story to the customer

Different customers, different doors in — each story below is a combination of real features. Nothing oversold, nothing promised.

🍜 Restaurant / retail store: turning passers-by into customers

Pain: **no exposure without paying for ads**, passers-by don't know you exist; regulars live in a group chat, new faces slip away.

The WeiCity way: open a channel with "Food menu" or "Shop" + "Today's deals" → post a **free voucher** or an off-peak special → nearby customers see you by distance on their phone and **claim a code** → **scan to redeem** at the counter, money never passes through the platform; once they follow you, every update shows in full on their "Followed merchants" page.

🏪 SME owner: sending quotes, contracts and catalogues

Pain: **files go feral once sent** — quotes get forwarded around, and outdated versions keep circulating.

The WeiCity way: park the quote in Drive → share it with **password + expiry + view-only** → the client views free of any sign-up, and **visit counts** show it was seen; new version? **revoke the old link** and send a fresh one. Lightweight DRM for documents — often a paid-tier suite elsewhere, included on every WeiCity plan.

💬 Everyday user: that group-chat file expired again

Pain: files in common messengers **expire within days** — important documents get re-sent over and over.

The WeiCity way: send the **Drive file** in chat — the link **never auto-expires**, survives phone changes, and can be **revoked** if sent wrong. Drive starts at RM35 a year for 30GB: fix "sending files" once and for all.

🎓 Creator / instructor: turning a course into revenue

Pain: videos get **freeloaded**, payment tools live elsewhere, followers are scattered across platforms.

The WeiCity way: on the Merchant plan, price the **video series** as one purchase, buy once and watch it all; **free preview episodes** pull viewers in; Stripe checkout in RM; the feed grows the audience, the channel keeps them — **one account closes the loop**.

An opener that works: "How many apps do you juggle to share files, run your shop, post deals and publish content? WeiCity does it with one — Drive starts at RM35 a year for 30GB, and the shop starts on the RM0 Starter plan. Nothing to lose by trying."

WEICITY

One account —
Drive from RM35 a year

Works in the browser, nothing to install; the App makes mobile even better.
Social, marketplace, nearby, cloud drive, chat — one account opens them all.
